EDUCATION

Stevens Institute of Technology
Master of Science in Computer Science

Sept 2024 - May 2026
Hoboken NJ, USA

St. Francis Institute of Technology (University of Mumbai)
Bachelor of Engineering in Information Technology CGPI: 7.93/10

July 2018 - May 2022
Mumbai, MH, India

RECENT EXPERIENCE

Princeton IT America
Data Analyst - Part Time

Nov 2023 – July 2024
Remote

- Created Python scripts to automate the process of matching resumes to job requirements from Kloudlink Solutions Clients, using factors like skills, experience, and education to improve accuracy and efficiency.
- Analyzed data to improve the performance of the matching system, making the results more relevant and accurate.
- Created reports and shared insights with stakeholders to help make better decisions based on performance data.
- Worked with managers to gather requirements, improve scripts, and ensure project goals were achieved, focusing on client needs.

Tata Consultancy Services
Assistant System Engineer - Full Time

July 2022 – July 2023
Mumbai, India

- Designed Python-based automation tools to optimize repetitive processes, supporting efficient system operations and task management.
- Performed Unit Testing, Integrations testing, debugging and troubleshooting issues.
- Participated in Code reviews and optimization of applications.
- Built SQL scripts for data extraction and modification to support custom client requirements, improving data handling and access.
- Resolved technical issues across live and test environments and contributed to system stability, learning cloud and server maintenance basics.

Sparks Foundation
Web Developer - Intern

Feb. 2021 – March 2021
Remote

- Crafted a dynamic banking website with HTML and CSS, featuring account balance checks, deposits, and user-friendly account creation/login/logout.
- Implemented a secure database to store user credentials, transaction history, and balances for a streamlined and secure banking experience.

PROJECTS

Browser Extension to detect malicious website (Published research paper on IEEE)

- Engineered a browser extension that will be able to detect any malicious sites and warn users about their nature. The user interface of this system is created using HTML, CSS, and JavaScript. The user credentials, feedback, and reports are stored in the Firebase database, encrypted using Firebase authentication tokens. This project utilizes three algorithms; Artificial Neural Networks (ANN), Support Vector Machine (SVM), and Random Forest. The trained 'ML model' are used as a persistent model to classify websites. The algorithm with the highest accuracy is selected to work with the extension which was SVM.

Air Quality monitoring system using BME680

- Designed and implemented a module that utilizes the BME680 sensor to gather diverse environmental data. Employed the Random Forest Regressor and Adaboost Regressor Machine Learning algorithms to predict Indoor Air Quality (IAQ) based on the collected information, enhancing our ability to assess and manage indoor air conditions effectively.

SKILLS

- Programming** – Python, C, SQL, C++, Java.
- Software tools & Technologies** - Git, GitHub, Android Studio, Unity, Visual Studio Code, Windows, Linux, basic knowledge of SAP BRIM/FICA(online self learning).
- Database tools** – MySQL, Toad, MongoDB.
- Certification** - Data Analysis using GenAI - NIIT, Programming for everybody inPython, Introduction to HTML5 - University of Michigan Coursera.

EXTRA-CURRICULARS

- IT for Gaming event at St. Francis Institute of Technology** – Developed a basic 2D platformer game on Unity and provided IT support to participants.
- IT Colloquium for Society at St. Francis Institute of Technology** – Participant in coding competition.
